Executive Overview

SNAPSHOT

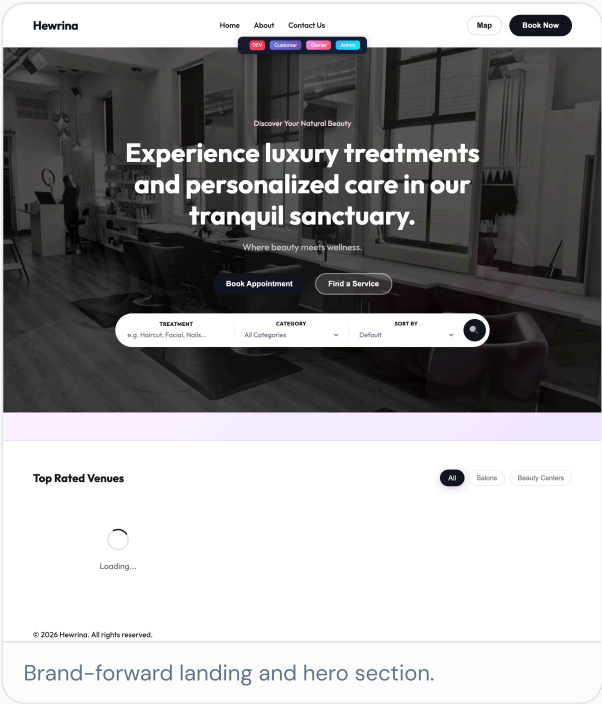

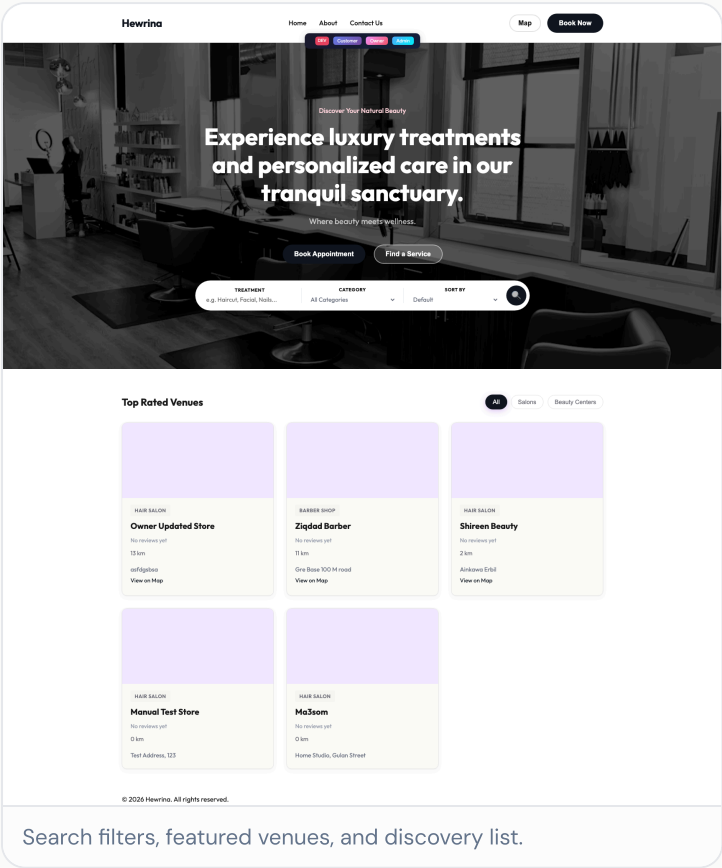

Hewrina is a booking and discovery marketplace for beauty and wellness venues. The platform combines appointment scheduling, venue discovery, service-level promotions, and integrated product commerce in one customer and operator experience.

Customer Discovery Experience

FRONT STAGE

The entry journey centers on search and discovery. Users can immediately browse venues, apply filters, and move into profile-level booking or shopping without leaving the primary product surface.

CUSTOMER ACTION	SYSTEM RESPONSE	BUSINESS IMPACT
Search by treatment/category	Instantly filtered venue inventory	Faster conversion to booking intent
Browse venue cards	Ratings, distance, and offer cues visible	Higher confidence and click-through
Switch to mobile	Layout adapts for small screens	Usable across phone-first audience

Venue Profile: Services + Shop

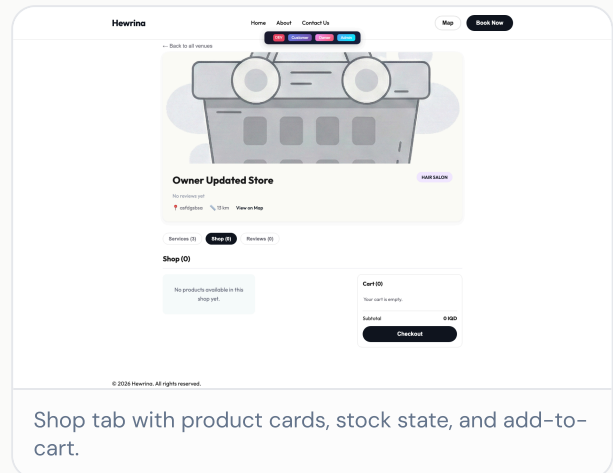

TASK 6

IMPLEMENTED

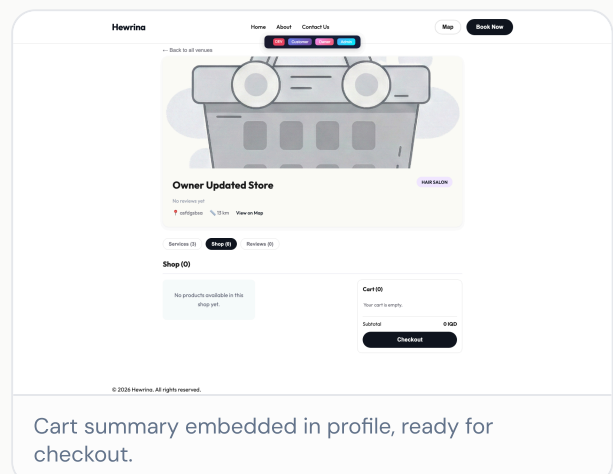

Each venue now combines service booking and product commerce inside one profile. Tabs separate Services, Shop, and Reviews, while cart and stock awareness drive the commerce flow.

Services tab with offer visibility and direct booking actions.

Shop tab with product cards, stock state, and add-to-cart.

Cart summary embedded in profile, ready for checkout.

Product Management

- Owner adds name, price, image, and stock quantity.
- Out-of-stock products auto-disable purchase action.
- Stock counts appear at point of purchase.

Cart + Checkout

- Quantity controls with max stock enforcement.
- Checkout writes `orders` collection records.
- Stock decremented after order placement.

Revenue Expansion

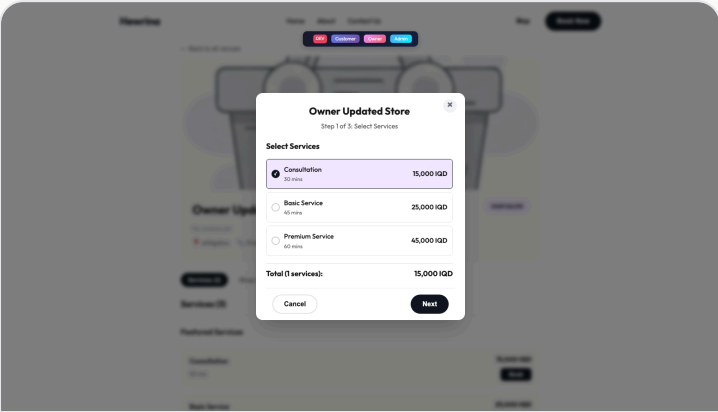

- Adds non-service revenue stream for venues.
- Raises per-customer basket value.
- Improves repeat purchase potential.

Booking Flow and Smart Deals

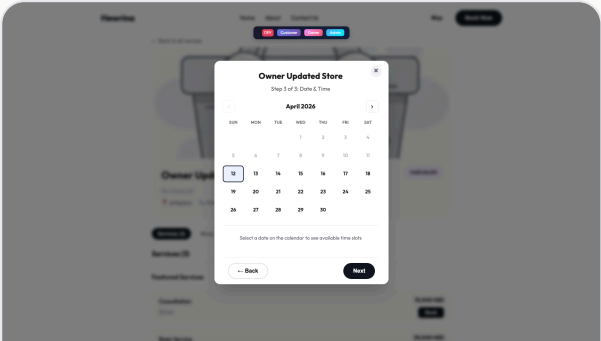

TASK 5

IMPLEMENTED

The booking wizard now supports time-window-based promotions. Off-peak deal logic is surfaced during slot selection and correctly applied to totals at confirmation and booking submission.

Step-by-step booking wizard: service, staff, date/time, confirmation.

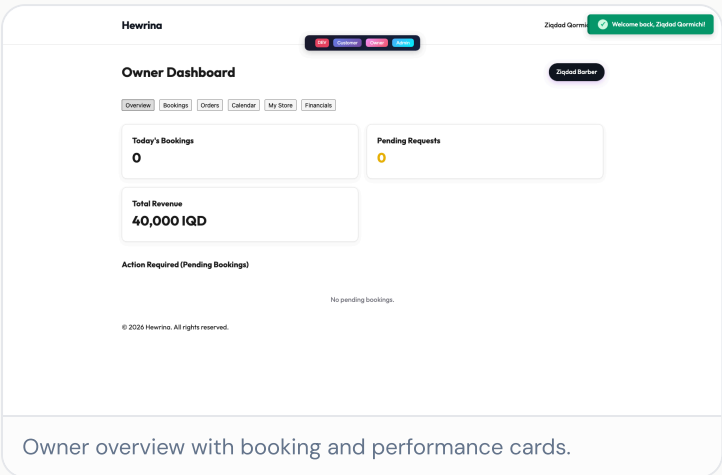

Time-slot selection with discount indicators for eligible windows.

CAPABILITY	BEHAVIOR	BUSINESS OUTCOME
Offer valid hours	Owner/Admin can set start-end time window per offer	Supports controlled off-peak promotions
Slot-level highlighting	Eligible times show discount cue in calendar/time list	Guides customer to underutilized hours
Final total integrity	Discount is recalculated from selected slot before submit	Prevents mismatch between UI and stored booking price

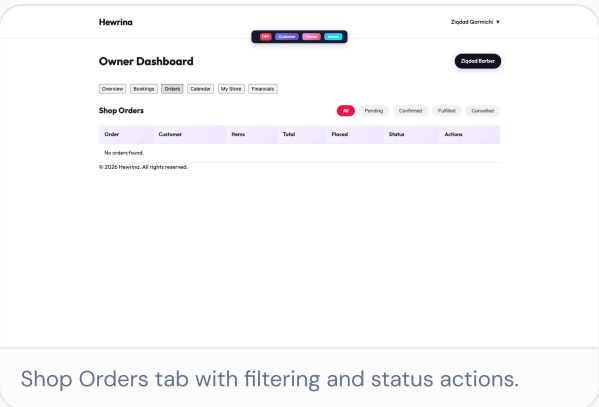

Owner Operations Dashboard

OWNER VIEW

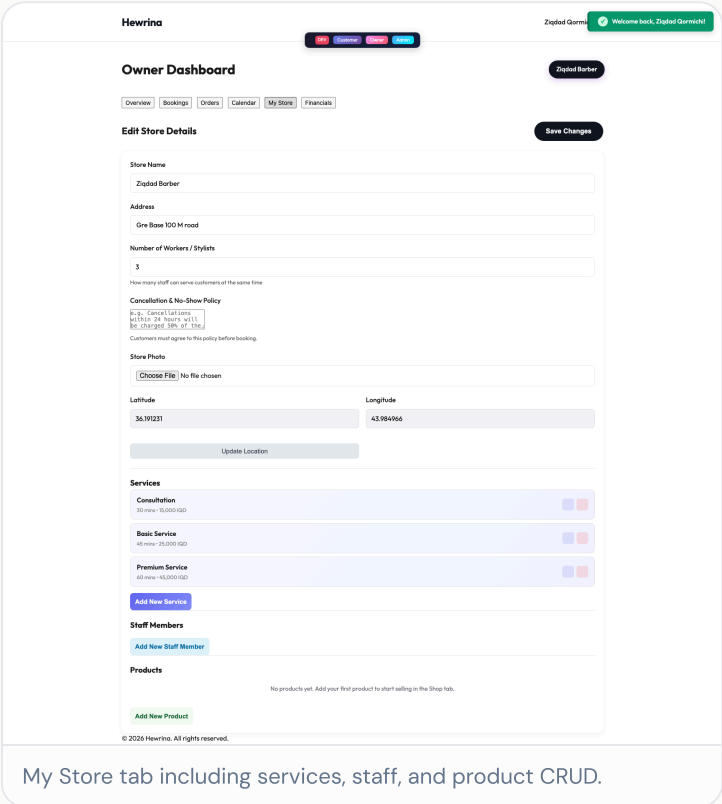

Owners now operate service delivery and commerce from a single dashboard surface, including store configuration, product inventory, and order lifecycle controls.

Owner overview with booking and performance cards.

Shop Orders tab with filtering and status actions.

My Store tab including services, staff, and product CRUD.

Order Lifecycle Controls

- Status updates: pending, confirmed, fulfilled, cancelled.
- Filters for faster triage and service-level discipline.
- Cancellation restocks inventory automatically.

Operational Benefits

- Single source for appointments and retail operations.
- Reduced manual coordination across systems.
- Cleaner handoff to staff and front-desk teams.

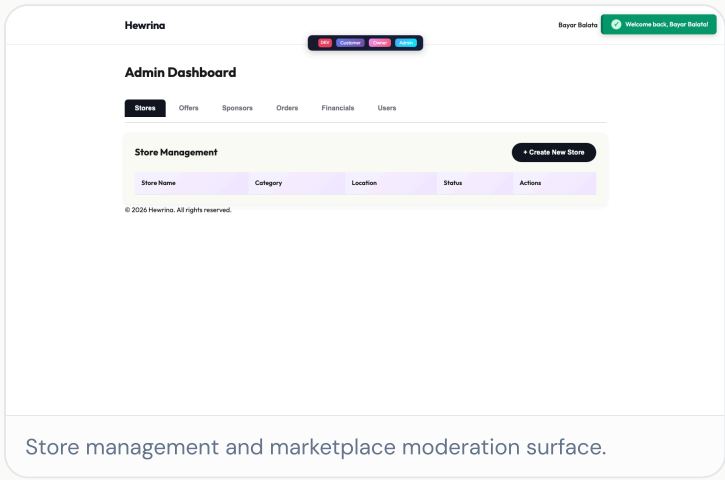

Data Governance

- Owner-scoped order visibility by store association.
- Consistent state transitions across owner/admin actions.
- UI refreshes immediately after status changes.

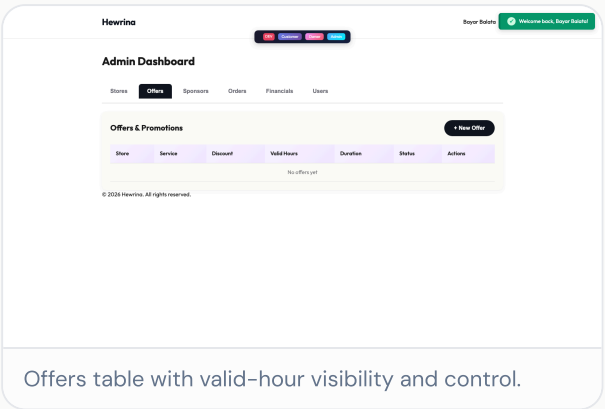

Admin Governance and Oversight

ADMIN VIEW

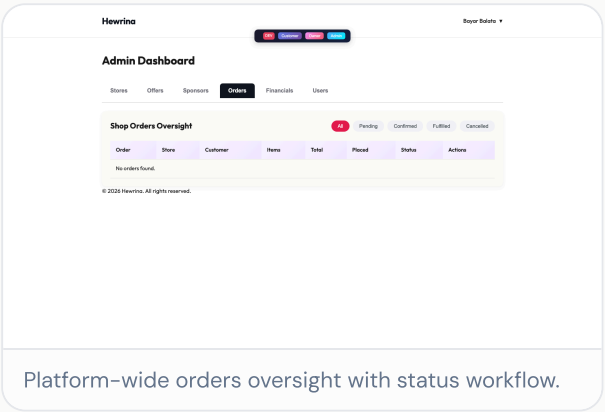

Admin surfaces support marketplace governance, promotional control, and platform-wide commerce visibility with standardized controls.

Store management and marketplace moderation surface.

Offers table with valid-hour visibility and control.

Platform-wide orders oversight with status workflow.

ADMIN MODULE	WHAT IT CONTROLS	WHY IT MATTERS
Stores	Creation, activation, and catalog governance	Maintains marketplace quality baseline
Offers	Discount logic and valid-hour boundaries	Prevents uncontrolled promotions
Orders	Cross-store fulfillment and exception handling	Ensures service continuity and trust

Feature Completion Matrix

DELIVERY STATUS

The following matrix summarizes the currently delivered product capabilities relevant to booking, commerce, and operational management.

FEATURE GROUP	DELIVERED CAPABILITY	STATUS	NOTES
Discovery	Search filters, venue cards, profile entry flow	LIVE	Desktop and mobile validated.
Booking Wizard	Service, staff, date/time, confirmation steps	LIVE	Integrated with offers and final price calculation.
Smart Deals	Time-window offers, slot highlights, slot-aware total	LIVE	Supports off-peak conversion strategy.
Venue Shop	Product catalog, cart, checkout, stock decrement	LIVE	Adds retail revenue path.
Owner Orders	Status actions + filtering + restock on cancellation	LIVE	Store-scoped operational control.
Admin Orders	Platform-level order monitoring and status actions	LIVE	Centralized governance and escalation support.

CURRENT	Core business flows are complete and demo-ready for stakeholder validation.
NEXT	Run production hardening: edge-case tests, monitoring, and release checklist finalization.
SCALE	Expand analytics dashboards and add conversion instrumentation for offer performance.

Technical Readout

IMPLEMENTATION

Architecture remains intentionally lean for velocity: single-page frontend with Firebase-backed auth and persistence, supporting role-aware rendering and transactional updates.

Application Stack

- Frontend: HTML5, CSS3, Vanilla JavaScript
- Data: Firestore collections for users, stores, bookings, orders, offers
- Auth: Firebase Authentication with role-based UI switching
- Storage: Firebase Storage for media assets

Transaction Integrity

- Checkout writes order records and decrements product stock.
- Order cancellation triggers stock restock logic.
- Booking total recalculates against selected slot + valid-hour offer.
- Owner/Admin status updates refresh tables after mutation.

Customer Layer

Discovery and profile flows optimized for quick conversion from search to booking or cart checkout.

Owner Layer

Unified operations across appointments, products, and order fulfillment statuses.

Admin Layer

Marketplace governance for catalog quality, promotions, and order-level intervention.

Production Readiness Checklist

GO-LIVE

The product is presentation-ready and functionally complete for the delivered scope. The checklist below frames final hardening before full production launch.

AREA	RECOMMENDATION	PRIORITY
Security Rules	Validate Firestore role constraints for order and offer writes.	High
Data Validation	Add strict numeric guards for prices, stock, and discount ranges.	High
Observability	Track booking conversion, cart conversion, and order lifecycle latency.	Medium
Quality Assurance	Run regression matrix for customer/owner/admin paths across devices.	Medium
Business Reporting	Expose owner-level sales and offer utilization dashboards.	Medium

Current Outcome

Hewrina now supports end-to-end marketplace operations with both service bookings and product commerce, including role-aware dashboards and governance controls.

Business Narrative

The platform is positioned as a premium booking and retail ecosystem where venues can grow utilization and average order value through integrated operations.
